

CLAIMS:

1. Quick-action tensioning device (1) for cable control switches, having a holding element (2), to which a cable (3) can be fastened in a clamping manner, and having a housing (8) which is connected with the holding element (2), characterized in that devices (9, 10) for the precise adjusting are provided between the housing (8) and the holding element (2).

2. Quick-action tensioning device according to Claim 1, characterized in that a threaded shaft is provided between the housing (8) and the holding element (2), and the distance between the housing (8) and the holding element (2) can be adjusted by way of a nut (10).

3. Quick-action tensioning device according to Claim 2, characterized in that the nut (10) is constructed as a knurled nut.

4. Quick-action tensioning device according to one of Claims 1 to 3, characterized in that a device for detecting the cable tension is provided in the housing (8).

5. Quick-action tensioning device according to one of Claims 1 to 4, characterized in that a display (11) for the cable tension is provided on the housing (8).

6. Quick-action tensioning device according to one of Claims 1 to 5, characterized in that the holding element (2) has a plate (4), and the cable (3) can be clamped between the plate (4) and a body.

7. Quick-action tensioning device according to Claim 6, characterized in that the cable (3) is deflected between the plate (4) and the body.
